

# TwinN Crop Trial

*During an in-field study in Lincolnshire TwinN was applied to Oil Seed Rape in the first week of November 2008*

**Control**

**TwinN**

## Key Results

A single application of **TwinN** in mid February shows superior root structure, enhanced foliage growth and improved over-wintering and recovery from adverse conditions. This trial will be followed to harvest but clearly shows **TwinN** working in cold soil conditions.

# TwinN Crop Trial

*Oil Seed Rape*

*The in-field study showed **TwinN** plants had:*

- A more abundant canopy
- Advanced recovery from winter conditions
- Improved start for the Spring
- Enhanced root structure

*Further results and conclusions will be made available following a second application of **TwinN** as per the recommended application instructions.*
